

Scout Rocket Mail - Belgium 1960

Rocket Mail: Rocket mail is the delivery of mail by rocket or missile. The rocket lands by deploying an internal parachute upon arrival. Dr. Adam J. de Bruijn from Amsterdam experimented with rockets, and he and his co-workers, members of the Nederlandse Ruimtevaart Studio (Dutch Space Flight Studio), launched more than 100 mail rockets in Europe from 1936 onwards. The rockets could travel 20 km or more. De Bruijn made an important contribution to the development of rocket mail.

The term **Scout Rocket Mail** is used to describe rocket mail associated with Scouting. Nederlandse Ruimtevaart Studio launched two mail rockets at Raeren, Belgium on April 27, 1960, in commemoration of the Golden Jubilee of Scouting in the United States. The **purpose** of this exhibit is to show the philately of these two rockets.

The **scope** encompasses all aspects of philately from these launching of these two rockets: locally issued Scout rocket stamps, presentation cards and astrograms, including proofs, colour varieties, flown covers and cards. Special rocket cachets identify mail from the rockets *Daniel Beard* and *Baden Powell II*, respectively. Flown covers carry a bicoloured locally printed rocket mail stamp. The stamps were issued imperforate and perforated in sheets of four. Special astrograms were produced; the rocket equivalent of aerograms or air-letters.

Rocket Baden Powell II

Named after Lord Baden-Powell of Gilwell (1857-1941), founder of the Scout Movement and Chief Scout of the World.

Rocket Daniel Beard

Named after Daniel Carter "Uncle Dan" Beard (1850-1941), an American illustrator, author, youth leader, and social reformer who founded the Sons of Daniel Boone in 1905. Beard merged his organization into the Boy Scouts of America when it was founded in 1910. He later became editor of *Boys' Life*, the BSA official magazine.
